

DETOUR[®]

Rat Repellent Gel

Contact with Gel Sends Them Fleeing!

DETOUR[®] Gel Trays Applications

About the Product

Whether you're dealing with an active rat or mouse infestation or simply staying ahead of one, the patented capsaicin-based DETOUR[®] gel trays (EPA #85002-1, NSF Approved) make **protection simple and hassle-free – no direct application needed**. Just **place them wherever activity has been identified or suspected** and let the gel work around the clock. **Pair the tray with a bait, attractant, or fresh food** to draw the rats or mice directly into contact with the gel for faster, more effective results. It's one of the **simplest and most reliable ways** to keep rats and mice at bay at **home, in commercial buildings, or anywhere protection is needed**.

How to Apply the Product

- **Wear protective gloves** to ensure safe handling.
- Remove twin trays from packaging and open them to expose DETOUR[®] Gel inside.
- Place trays with **gel-side up** on a horizontal flat surface.
 - Use **double-sided tape to place** the tray to surface if surface is slippery.
- To increase efficiency, **flatten bait, an attractant, or fresh food into the center of the gel tray** to ensure contact with the gel.
- **Replace attractant as needed** until rat and mice activity has left the area.
- Check trays daily or if activity is detected.
- **Replace trays as needed** if gel layer is depleted.
- If trays **appear undisturbed move to a new location** where rat and mice activity may be higher.
