

DETOUR® RatTrax® Tracking Tunnel Applications

About the Product

The DETOUR® RatTrax® Tracking Tunnel puts **professional-grade detection** right in your hands. Each kit includes **two tubes, two packs of UV-tracking powder, a UV-blacklight and double-sided tape**. When the tube is deployed, rats or mice pass through the tunnel where their feet and fur pick up the non-toxic, food-grade UV active powder inside. **With the UV-flashlight, their exact travel paths and entry points are illuminated** in low-lighting or darkness. After identifying highly active areas, **apply DETOUR® gel to confirmed paths of travel, entry and exit points, as well as inside the tunnel**. When used with a complete DETOUR® exclusion strategy, **RatTrax® ensures every application is targeted and effective**.

How to Apply the Product

- **Wear protective gloves** to ensure safe handling. **Clean and dry surface prior to treatment**.
- **Identify suspected areas of activity** for treatment through droppings, fur grease, chew marks and scratches.
- Remove one cap end and **add UV tracking powder to the inside of the tunnel**. Replace cap and gently **shake the tube to coat the entire inside** surface with the powder, leaving excess powder on the bottom (if applying horizontally).
- For best results **place bait, attractant, or food in the center** of the inside of the tunnel
- Remove both end caps and affix tunnel to treatment surface using included double-sided tape.
- **After 24-48 hours**, use included UV blacklight in low-light or darkness to identify tracks starting from the tunnel.
- If tracks disappear before origin is identified, simply move the RatTrax® tunnel to the point where the prints disappeared to track further.
- **Deploy DETOUR® gel products to identified entry/exit points and highly active areas, as well as the interior of the RatTrax® tube for maximum efficacy.**

Recommended Application Areas

- | | |
|---|---|
| <ul style="list-style-type: none"> • Back Edges of Kitchen Drawer cavities • Along Baseboards and Floor joints • Interior of Cabinets • Underneath/Behind Appliances and Furniture • Near Rat and Mice Scratches, Bite Marks • Near Identified Rat Fur Grease Marks | <ul style="list-style-type: none"> • Suspected Rat and Mice Paths • Suspected Entry/Exit Points • Interior of Wall Voids • Commercial Shelves • Behind Furniture and Appliances • Attic and Basement Spaces |
